

# README – Smit's Modules (`helpers.py` & `storage.py`)

Author: *Smit Vengurlekar*

Modules: `helpers.py` and `storage.py`

Project: Library Management System

Team Members: Manas, Piyush, Smit

---

## Overview

These two modules handle the **utility backbone** of the Library Management System – ensuring data is safely stored, loaded, and displayed properly in the console.

File	Description
<code>helpers.py</code>	Contains helper functions for confirmations and UI formatting.
<code>storage.py</code>	Manages saving and loading book data from a JSON file.

---

## 1. `helpers.py`

This file contains simple functions to improve the user experience – for example, confirming actions and adding visual dividers in the console output.

### Code:

```
def confirm_action(message):
    choice = input(f"{message} (y/n): ").lower()
    return choice == 'y'

def display_line():
    print("=" * 40)
```
